

Frankley Buildings

This Grade II listed Georgian terrace house lies on a steep site in the centre of Bath. The project replaces an existing poor quality conservatory to the rear of the dwelling that disconnects the main accommodation from the rear garden. The replacement is a contemporary addition in glass and steel designed to touch the existing building as lightly as possible.

Structural glass beams maximise daylight, and the reinstatement of an opening in the rear wall of the house re-establishes a visual and physical connection with the outside space. The new addition provides a new washroom, open plan kitchen, dining and utility areas, whilst improving access to the elevated garden.

Location : Camden, Bath

Client : Private

Structural Engineer : Momentum Engineering

Contractor : R.G.Miles & Son

Status : Completed 2009
